DETAILED ACTION

Continued Examination

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11 May 2006 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Title:

The title has been changed to: "Pixel structure having electrical field shielding layer and transparent capacitor electrodes".

End of examiner's amendment.

Allowable Subject Matter

3. Claims 1-5, 7-9, and 12 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or fairly suggest the device of claim 1, in particular the limitations that there is a pixel electrode and a transparent capacitor electrode with a capacitor electrode (which is also transparent) between them, forming the pixel storage capacitor, and also an electrical field shielding layer between the data line and the pixel line. Claim 1 is therefore allowed, as are claims 2-5, 7-9, and 12 which depend from it.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 6,894,735 to *Chae et al.* discloses a pixel electrode and transparent capacitor electrode with a capacitor electrode (which is also transparent) between them, but does not disclose an electrical field shielding layer between the data line and the pixel line.
